

Wireless Security Cameras

OmniSight External Wireless CCTV:

Our **OmniSight** wireless CCTV system has been specifically designed for rapid and easy deployment. Attention has been paid to make it as flexible and as easy and quick to install as possible, allowing customers to commission the system without having to go to the expense of calling out specialist security installers.

The first picture here depicts a colour camera with built-in infra-red lighting. Connect this to a battery (or preferably a mains supply for continual operation) and it will send amazingly clear video footage to the receiver in the house or site-office, which connects directly to any TV or monitor. An audio facility, allowing you to listen to activity around the camera, can be added for £20 / camera. The maximum range between camera and receiver is 100m without obstructions in the signal path, using the built-in stub antennae. A complete single-camera system comes in at just **£295 + VAT** complete.

It comes in single or multi-channel versions. The receiver has an automatic switcher which will, if required, cycle through up to 4 cameras in sequence. Cameras can be added to the system at any time (up to a maximum of 4).

The range quoted assumes ideal conditions. Obstructions in the signal path will reduce range. Antennae are available to extend range to a kilometre as described below.

Long-range antenna - **£50.**

Plugs directly into the receiver and increases reception range to around 400m. Adding this antenna to the transmitter and receiver will boost range to around a kilometre.

Recording Footage:

Images can be recorded on a digital video recorder (DVR), which stores footage on a built-in hard disk. This can be configured to record continually or only when activity is detected by the on-board motion detection. Live and recorded pictures may also be viewed over LAN or ADSL (broadband) connection from anywhere in the world. Call for DVR options, as we have a wide range available.

All systems are dispatched as complete easy-to-install kits.

Prices (ex. VAT):

Single-camera system (one camera and 4-channel receiver) - **£295**

Audio upgrade - **£20 / camera**

Additional camera /transmitter - **£179** each

Long-range (500m) receiving aerial - **£50**

4-channel DVR with 500Gbyte HDD, motion detection & LAN output for connection to broadband for remote monitoring - **£320**

Hardwired OmniSight cameras for direct connection to DVR or monitor - **£149** each

For extended range systems, or if you have any queries, please call...

Alarms for Farms

The Old Mill, Hownam Howgate, Kelso, Roxburghshire, TD5 8AJ

01573 440761

www.alarmsforfarms.com

Camera Features:

- 1/3" Colour Sony HQ1 CCD sensor
- Rugged aluminium enclosure
- Over 540 TVL Horizontal Resolution
- Varifocal 3.5-9mm 'zoom' lens
- External adjustment pots
- Electronic Iris
- 36 x **HIGH POWER** I.R LED
- Up to 50M Night vision range
- Weather resistant to I.P66
- Photocell Control
- Fully 'Cable managed' wall mounting bracket
- Adjustable sunshield
- 12V DC

DVR Features:

- 4 Channel Digital Video Recorder
- H.264 compression
- Real-time recording at D1 resolution
- Superb high resolution play back quality in Full screen or Quad format
- Up to 30% longer record duration than MPEG4
- USB back up to memory stick.
- Continuous / scheduled / Motion detection & event recording
- Motion detection - area & sensitivity adjustment
- Network remote monitoring over Internet or LAN with multi-user capability
- In-built VGA interface for connection to PC monitor
- Covert camera display settings
- Main monitor Out (BNC)
- Password Protection
- Audio In x 4 / Out x 1
- Remote control hand-set
- Optional USB Mouse control
- Max 2TByte HDD capacity (SATA)
