

GSM Remote Monitoring Systems

External Dual-beam system with GSM dialler: - £299

A 20m dual beam combined with our state-of-the-art 99-channel receiver / GSM dialler to provide perimeter protection and remote monitoring where no landline is available. It will send text messages and / or voice calls to up to six telephone numbers when triggered. Perfect for remote applications and construction sites. The control unit has 99 wireless and four hardwired zones. In addition to the GSM dialler, it includes a landline dialler, for applications where a landline is available. It is armed and disarmed with a remote keyfob (supplied), by text message or on a programmable schedule.

Internal Door Contact system with GSM dialler: - £209

An internal door contact combined with our state-of-the-art 99-channel receiver / GSM dialler to provide perimeter protection and remote monitoring where no landline is available. It will send text messages and / or voice calls to up to six telephone numbers when triggered. Perfect for remote applications such as workshops, lockups etc. The control unit has 99 wireless and four hardwired zones. It is armed and disarmed with a remote keyfob (supplied), by text message or on a programmable schedule.

External Door Contact System with GSM dialler: - £229

An very rugged metal-cased door contact with an operating gap of 60mm combined with our state-of-the-art 99-channel receiver / GSM dialler to provide perimeter protection and remote monitoring where no landline is available. It will send text messages and / or voice calls to up to six telephone numbers when triggered. Perfect for remote applications such as workshops, lockups etc. where the door may not be quite as tight as an internal house door. The control unit has 99 wireless and four hardwired zones. It is armed and disarmed with a remote keyfob (supplied), by text message or on a programmable schedule.

Roller Door Contact System with GSM dialler: - £235

A very rugged metal-cased roller-door contact with an operating gap of 85mm combined with our state-of-the-art 99-channel receiver / GSM dialler to provide perimeter protection and remote monitoring where no landline is available. It will send text messages and / or voice calls to up to six telephone numbers when triggered. Perfect for remote applications such as workshops, barns and lockups where a roller door is needs protecting. The control unit has 99 wireless and four hardwired zones. It is armed and disarmed with a remote keyfob (supplied), by text message or on a programmable schedule.

Under / Over Temperature System with GSM dialler: - £209

A mechanical thermostat combined with our state-of-the-art 99-channel receiver / GSM dialler to provide perimeter protection and remote monitoring where no landline is available. It will send text messages and / or voice calls to up to six telephone numbers when triggered. Perfect for applications such as greenhouses, pheasant sheds, piggeries etc, where an undetected temperature fluctuation could prove catastrophic. The control unit has 99 wireless and four hardwired zones. In addition to the GSM dialler, it includes a landline dialler, for applications where a landline is available. **It also automatically reports a mains power failure.**

It is armed and disarmed with a remote keyfob (supplied), by text message or on a programmable schedule.

Note: The GSM Control Unit can be used with any combination of the sensors mentioned, and many others besides. If you have a remote monitoring requirement, please give us a call.
