

QuadGuard

Revolutionary ATV Protection System

Marvellous, aren't they, quad bikes. Jump on and you're away over the fields. Convenient and indispensable to you, but also a gift to thieves. There are a number of mechanical locks and such-like on the market to try to make life difficult for them. Unfortunately they also make yours a little less agreeable, and the temptation is to leave the thing unprotected if you're in a rush or you're only leaving it for a short period. Mechanical devices also have the drawback that they allow the thief to work at them for as long as he needs, undisturbed, without giving you any warning.

QuadGuard is a revolutionary new system that **stacks the odds firmly back in your favour**. It uses a combination of highly sensitive vibration and movement detectors connected to a miniature transmitter. The instant anyone starts to tamper with your ATV (or tractor, caravan, horsebox or trailer) a signal will be transmitted to a receiver up to half a mile away. Usually this would be located in your house, although it can easily be left in a farm office or workshop, or with a neighbour if you're away. The receiver's built-in buzzer or siren will warn you that an attempted theft is in progress. The transmitter can be silent, giving you the element of surprise, or equipped with a bleeper to warn the thief that he's been detected. The system is armed and disarmed with a key. The sensor and transmitter can be fitted anywhere on the quad, usually tucked away out of sight.

System components and extras shown below:

QG/Tx Vibration sensor / transmitter

Transmitting range - 400m (can be extended with antenna on receiver)
Power source - Internal AA batteries (average life 2 years)
Built-in buzzer (can be disabled if required)

QG/R1 Single-channel receiver / buzzer:

Built-in buzzer (90dB) or mini-siren (105dB)
Receiving range - 400m with built-in antenna or 800m (line-of-sight) with whip antenna
Power source - connects to mains

QG/R8 8-channel receiver:

Built-in sounder
Receiving range - 400m with built-in antenna or 800m (line-of-sight) with whip antenna
Power source - connects to mains. Battery back-up optional.
Supplied pre-programmed. Provides visual indication of location of intrusion (8 separate zones). Low sensor-battery warning. Can be connected to siren and / or auto-dialler. Also has fire & panic channels.

Pocket Pager:

Transmitting range (from receiver) - 800m
Power source - internal AAA batteries

Perfect to keep you alerted when you're out and about around the farm. The QuadGuard transmitter sends a signal to the receiver in the house, and from there the alarm is relayed to the pocket pager.
